Hello,

I'm having fun and experimentations in order to win time when doing doing the tv versions of movies I mix.

I'd like to use the auto gain like a kind of leveller.

But it's hard to understand how it reacts, it seems to depend on multiple factors like threshold, ratio, knee...

The manual is quite mysterious about that, and I don't neither understand the "7 dB" stuff....

Can you tell me a bit more about it ?

Thanks !
