
Subject: LIO8 - SPDIF to AES?

Hi,

I want to connect an Akai Z8 sampler over spdif at 96Khz to my LIO8 AES i/o.
Would I need some converter to go from consumer to pro digital impedance? How would the LIO8 react if I don't? If converter would be required I might get the spdif edge card, but rather keep that slot for adat in the future.

Thank you

R
