Hello,

Just wanted to know if making adjustments to the delay parameter in ChannelStrip 3 is compensated for in Digital Performer 8, which has plug in delay compensation.

thanks,  
Carlos

No -- the delay that you put in to the plugin is intentional delay (e.g. the delay is the effect) -- so you don't want it compensated; as a result it is not reported to the host, and the host will not compensate for that delay.
