Hello, I need a new USB HUB.. mine has problems (actually it always worked bad).. like usb disconnect or don't connect when they are supposed to

And I was also thinking about getting a FW hub to avoid damage (I don't need more FW because each device has its own bus, but I'm planning on getting another LIO, so I would like something you know works well with MH interfaces).. also, with a FW hub in case something goes wrong, the hub will be damaged but not the computer or the interface, right?

Well, I wanted to know what MH suggest regarding USB and FW hub.. if you could suggest me some brand, model, that you know works very good (and I hope I'll be able to find it in EU)

Oh my Mac Pro has actually USB2, but I think USB3 work anyway, right?

Thank you

p.s. if anyone, other than MH, have positive experiences with hubs and MH interfaces, is welcome! ;)
