Hello,

is it possible to use the Mac Audio System Controls with the Monitor Controller, so I can use the mute / lower volume / raise volume Button on my Macbook and the System Volume Bar in the statusbar of macOS?

Thanks

No, sorry. Not with the current software.

There are key-commands to control it though, and you can use them within any app as long as MIO Console is running...

Thanks BJ, hope you're considering including this feature in the next version of the console.

is there a way to reset the monitor controller, for some reason it's stopped corresponding with key commands.

It only works with the MHLink connection. If you are connected via USB, it is not going to have an effect. Is it possible that that is the issue?
