I'm new to the film industry and got a new role to play and I'm a very clumsy person. I tend to spill water and drinks quite often. I'm afraid I might spill on the script as well.

What's the best way to keep my script safe?

I'm thinking of converting the script to PDF then read it using Document Writer. It has a highlighting feature, I can easily highlight my lines.. I'm not sure. Please suggest me something. I'm so confused!

Thanks!
