I recently installed 3d in my LIO, connected with USB and I'm experiencing some audio dropouts. They sound like the bit-rate changes for a couple of seconds with a lot of scratching and then comes back to normal. That is happening 3-4 times per hour in Cubase, and in YouTube or Spotify (with Cubase closed) happens at least once per hour. When this is happening sometimes the mixer freezes (but monitor control working) and I have to restart it. I don't know if it is related, probably not.
All that both in v6.0.70 and in v6.0.73.
Any Ideas?

Console : 6.0.0 [3414]
Driver : <u/a>
BuildTag : beta_3d/pb6
Domain rooted on (LIO-8/4p/42110) [ONLINE]
LIO-8/4p/42110 v.6.0.73 [ONLINE]
