could folks using Spectral Foo please suggest measurement mic choices that work well for them? I am considering buying into Spectral foo and I am thinking a proper measurement mic should be part of the plan.

Thanks for any suggestions.

Hi Matthew,

Hope you are still looking for a measurement. These are my suggestions. Let me know if that helps.

Been a while since I've been on the Spectra Foo forum, glad to see it's still alive. I've had several measurement mic over the years including the Supberlux ECM999, the Behringer 8000 and currently a Dayton for onsite use and an Earthworks M23 for use in the shop. For day to day system alignment on show sites the cheap \$100-200 mics seem to work fine and hurt less to replace when they walk away or hit the floor hard.
