Hello,

i recently installed the latest version of mio console after updating to EL CAPITAN.

Now, when i open the mio console mixer and click at the top (Analog1) on the first channel, i see: (Mono) OFFLINE ULN2+DSP/Serial # and i don't see (or hear) incoming signal in mio's mixer... altho the potentiometer on the front panel of the card shows incoming sound.

Does this mean i need to update the firmware? And if so, where can i download it?

Thanks in advance

In the download of the latest version you find, besides the mio console, the driver version to be installed as well as Firmware updates for 2d and legacy devices.

https://mhsecure.com/metric_halo/support/downloads.html

Best

Ab
