
Subject: Lio 8 latency in logic 3d vs firewire

Hi,
I'm new to this forum but wondered if anyone could give me some advice. I'm currently using my lio8 with a thunderbolt to firewire adaptor. I'm a guitarist, and record monitoring through logic. I'm considering upgrading my interface to 3d. Would the 3d card, connected to my Mac via usb c/thunderbolt3 enable me to get lower latency? Also, what other benefits might there be, given that I only ever envisage using one interface?

Many thanks for any help

John
