Hello everyone,,

I'm Intrested in ULN8 but I've a question: I've a new macbook pro 13" with 1 FW and 1 Thunderbolt port.

I would use uln8 in live situation. In the same situation I might have to record from digital mixer (like digidesign or yamaha) via firewire.

Can I connect to the same computer uln8 via thunderbolt and mixer via firewire?

If yes can I record via firewire the multitrack audio stream?

my best regards
