I want to learn a little about 3D programming and an emulator could be a cool project to start.

I've started an NES emulator which I'll finish soon™ and I have an idea how OpenGL work, so these aren't the problem.

My question is: which 3D console should I try? How much harder it is from the NES?

This does not appear to be the correct forum for your question. This Forum is dedicated to the Metric Halo audio products.

Hi buddy, there are top 5 which you may go for. But as this forum is not related to this so I will suggest you to search your term on google, and you will get the list.
