Subject: How do I remove a group bus? (3d) + minor feature request

I added a couple of groups as part of some experimentation. Now I don't need them anymore, but they don't respond to "Delete Strips" and there don't seem to be any management functions in the "Configure Mixer" window.

Any ideas on how to remove them?

In case BJ sees this, I'd also love an easier way to remove inserts. Having to open the selection menu and choose "None" is a bit too slow, especially when working across many instances. Am I missing a trick? Just a "Select Insert > Hit Backspace > Insert Gone" workflow would be ideal.

If that seems too fraught for some uses, perhaps that behavior could be switched by a toggle in prefs.

Quick update: I found my group delete answer in another thread. Go to "Configure Mixer" and reduce the number of groups to delete all or some. Still feels like it'd be useful to be able to choose specific groups to ditch. :)

In the soon-to-be-released pb7, you can delete a Group or Aux by deleting the master strip for the bus (this will also remove the bus); so your feature request is implemented in the upcoming release.

As far as the request for easier/alternate ways to delete/remove inserts, can you please file a feature request via the Help > New Feature Request... command in MIOConsole3d? Thanks!

Hi buddy, is there any way to perform the action in bulk?
