I'd like to know if there's a way to map the softkeys on an AVID Artist Control to be able to switch between different speaker outputs, sources and the various other controls present on the Monitor Controller.

Currently, the Control Room pot on the Avid can attenuate the output gain knob on the 3d Monitor Controller, and if I press 'Setup' on the screen of the AVID it gives me the ability to switch the sources, dim and cut, but no way to setup the outputs etc.

Any tips here? I'm currently using 2 x 3D ULN-8's stacked here and this will give me Nirvana if possible. Lets hope...

Need help here too.

Thanks in advance.

Regards,
Shane
