just updated to 3d pb7 and went on to jam on the guitar as every night by hitting record a couple of times. I saw the folders and files being created in my usual recording folder but it's only afterwards that i noticed the files are empty.

pretty bummed about it cause i was recording some great ideas ... well i thought i was recording them .. they are gone now :(

after trying again i also noticed that the recording panel doesn't show the waveform while recording as usual, should've checked that while i was playin i guess.

i installed the new Mio panel and then updated the firmware via the new option in the console, rebooted the LIO and then installed the driver via the MIO panel and restarted the computer.

Anyone else experiencing this issue ? anything i can do to fix it ? i'm connecting via ethernet with USB disconnected ...

Can you post the Recording.log?

sur BJ, btw the only thing i changed to before except updating the software/driver/firmware was adding the \$date\$ to the recording filename in the preferences, not sure if that's related but since the files got created i guess not.

oh btw i also have another issue with the recording panel which was also present in the previous

version: i always have to go to the 'fit tracks vertically' option otherwise i don't see any tracks in the recording panel.

ok it seems the recording is working again after deleting the preferences. However i first could not figure out how to set up my monitor controller again. I thought it would be loaded when loading my console preset but it didn't and i couldn't add any monitor assignments in pb7. Just installed pb8 and now it's working. Quick question what are the greyed out outputs (see screenshot) ?

The headphones are automatically assigned to the Headphone CUE if MIOConsole creates the monitoring configuration (as it would do if you deleted your old one).

ok cool, cheers :)

i still have the issue that when i start the MIO panel the record panel only shows the first track on the whole height of the record panel. Would be cool to have an 'Auto fit/zoom track vertically' as an option that could be permanently enabled/disabled in a future build.
