Can I connect 2 computers to my 2882 3D via MHLINK? Thanks.

Not simultaneously, at the present time.

You can, however, connect one via MHLINK and the other via USB.

Edit : In fact, it is not the dual connection that is problematic, but only the output of the USB connection. I will contact the support.

Hi,  
That's a good news, so I tried to connect 2 computers on the same 2882 card.  
One is connected via ethernet.  
The other one is connected via Usb.

The second computer receive the signal in good quality.  
On the other way, from computer 2 to 1, I receive the sound distorted by  
a sort of distorted clock, ( following the signal amplitude.)

Usb is four channel, same issue opening MIOConsole 3d on 1st or 2nd computer.

any suggestion ?  
Thanks
