Does anybody try to connect an iPad to the MHLink via USB? I'm using an iPad mini via Camera Connection Kit. Working well with other Native Audio Interfaces like Fireface or Sounddevices MixPre USB.

It's not working on the LIO.

I'm adding an input channel in my console and my ProTools complains that the sample rate changed (even thou it didn't in the MHLink)

Then I hear sound coming from the iPad a couple of seconds then it's only crackling and no sound coming.

Shouldn't there be an Sample Rate converter build in?

Best
Titus
