Hello!

I recently purchased a Behringer X-Touch One to use with my ULN-2 3D with the MIOControl3D (beta3D\_pb9) and the One-Touch is in Mackie Control mode out of the box but despite selecting it in the interface preferences, it's not communicating with the mixer.

Any help is greatly appreciated!

[EDIT TO ADD]

Managed to get it sorted - I set the controller to use with Ableton then reset it back to using Mackie Control then reselected the inputs on the MIO preferences. Moved the fader and the master volume control moved!

Hmm. Maybe it wasn't really in Mackie Mode out of the box. Glad to hear that you got it sorted!!

The only thing now is that if I use the channel buttons, it seems to lose association so I have to hold the key combination to get it to click into MC mode again.
