
Subject: MIO Console 3D Eucon Monitor Control

I just got 2 of my 3D units installed and I was wondering about getting more than just volume and mute mapped in the Eucon Control Monitoring section. I would really love to be able to use my Avid dock and iPad to control sources, fold downs, and speaker sets. Is this something that is possible? Or should I be looking at adding an Xmon in between my ULN8 and speaker sets.

I know that I could just use the floating windows, but I have just got my whole setup to be pretty much mouse free and having all of the monitoring at my finger tips would be great!

Thanks again for all the help.

Jon
