Hi,

this morning my MH2882 3D stopped working.

The only change i've done is updating my system (the OS is the same, i've just updated it for security reason).

Now my MH switch on, i can see signal in the MIO console but nothing goes through my speakers.

How can i fix that ?

thanks

I am suddenly having the same problems with my 2D ULN-2. Suddenly no sound. The computer speakers work, but not the Metric Halo. The output meeter is showing on the unit itself, and on the I/O Control window, but not in the MH mixer window. IS there a workaround for this?

Thanks in advance to anyone who may read this.
