Hello !
My first message here.
Love my uln8 3d, bought it used a few weeks ago.
Didn't took the time to check everything since, and today I see phantom power doesn't work on mic inputs 6 and 8 !..

Also, all inputs are "noisy" while changing the mic gain. (maybe no prob here ?).

If you have an idea ?

Thank you !

Sounds like you should open a support ticket:

Hello !
Well, opened a ticket.
Quick response, great !
I swapped the 2 cards of the preamps mics (as suggested), and everything is ok now !
Strange, but ok for me !
