Hello !

Didn't found any clear informations on the internet : which kind of Ethernet cable must be used to connect for example my uln8 to my computer, over approximately 30 meters ?

Tried a few old cables found in my venue but did'nt worked (they worked with the mixing desk).

With a small cheap cable it's working.

I'm waiting for a cable I ordered, I choosed a cat 5e f/utp. But will It work ? Or do I need a f/ftp, or s/ftp ?

Anybody already tested some cables ?

Thank you !
