
Subject: Quick shortcut to set apply default fades?

In order to avoid clicks/pops I add 7ms of fade in and out to all my audio regions unless there's a reason not to. I know it's possible to select all of them and then set them together in the channel strip "Region" drop down menu. However, some of my regions already have fades, and I don't want them to be altered (for example using the slow down feature or a long fade out on a certain region). There's a key command for "Apply last edited fade" which is super useful except it only remembers the fade in OR the fade out, not both. Is there a fast way to have a key command do both? Thanks
