Hi all,

I have been sending some feature requests to MHLabs from time to time using the help menu item but I'd like to know what other users wish for

I'll start:

Horizontal MC window option: I'd like to have an horizontal Monitor Controller window similar to the old system, the new one uses too much real estate for me and blocks important parts of the screen in DP..

Sends on Aux Strips: I'd love to have sends on Aux strips, this way I don't have to create an extra input strip and assign its input to the Aux output when I need to create holdback mixes of reverbs etc.

FFT smoothing in EQ Graph: I'd love to be able to have some kind of time smoothing between the instantaneous and the average spectrum views in the various EQs (Channelstrip and Sonic EQ) it would be very useful, Instantaneous is a bit too jumpy and average a bit too slow..

Meter view in Session: It would be great to have an horizontal (input) meter on each track in Session view.

What are your dream features?

All I need is FFT smoothing in EQ Graph as you listed above, that would make things so much better.
