---

My ULN-2 is getting quite old. I'll upgrade it with the new 3D digital section when it comes out. In the meantime, to consider giving my unit some preventative maintenance, does anybody know if there are any electrolytic capacitors in these units, and/or if they can and should be replaced? If so, how could I identify them and what might the specs be of such caps? Thanks in advance for anybody's wisdom on this matter.
