Hello.

I've bought a little control surface of ICON : iconcontrols

I've managed to make movies download it work with the mixer of Mio console.

It is recognized and works, but far not good enough !

I'd like to assign myself movies at forum the midi notes and channel of the "iconcontrols" to fit perfectly to my mixer, but i can't find any mapping of the Mio mixer !

It runs in Mackie control mode.

Some faders move together : the first of the surface moves the first, and the master (9th) faders...

The mute and solo buttons rarely correspond...

Thanks for help.
