The "Route New Strips to Host" function is amazing for quickly setting up a session. However, sometimes it's not behaving correctly for me. See the attached image: the automatic routing is skipping Host 13, even though in the Direct Out menu Host 13 is clearly available. After Routing to 14, the following New Strip gets routed to Host 26, even though 15-25 are clearly available. Is there some kind of reset function so that Mio Console sees that all host channels are available for automatic routing from new strips?

thanks!
