Hello,

I just bought 2882 and i have a problem routing (linking?) it with logic express 9. I use a mac 10.5.9.

The daw 1/2 recognize the stereo out signal from logic and it plays but when i put my i/o plug-ins in logic (after having put the mio console plug-in) i can choose only the 1-2/3-4 etc input and output and cannot get a daw and fw in/out. Moreover in my mio console- in the inserts part- i cannot access the "graph" section (and the macro too) - i cannot enable them. I cannot too send my analog channels into the daw 1/2 even if the fw 01 is plugged in dir.out.

Thanks for your help

Sorry to take your time people... i found the answer 1 hour after posting in another forum:

<http://www.logic-users-group.com/forums/showthread.php?t=485> 5

Yeah it was the I/O labels. See you soon for something more difficult
