
Subject: MIO Console 5 quit unexpectedly
Posted by [Trunks](#) on Sat, 15 Feb 2014 11:56:34 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi,

I use a ULN-2 with a Firewire to Thunderbolt Adapter on my MacBook Pro with OS X 10.9.1. When I plug the ULN everything works fine and I can select it in the System Preferences in Ableton Live.

If I start the MIO Console 5.6.04.215 it immediately shuts down again and the error message says Application quit unexpectedly.

If I disconnect the ULN-2 I can open the MIO Console with no problems. But if I plug the ULN-2 in while MIO is open the same crash happens immediately.

I already reinstalled the app and also deleted the MioConsole Preferences in the User Library with no success.

I am truly desperate and hope anyone can help me.

No one here with the same problem or any tips for me?

I already contacted the Support and am still waiting for help.

The worst thing is I am under time pressure and can not start with the recording right now :(

Support is not open on the weekends, so you will not get a response until monday.

The crash looks like to has to do with console sync, but it is not 100% clear because I can't see the entire thing.

Try rebooting your box with the downarrow button on the front panel held down and see of that works. If it does, use the erase-bootstates command from the utilities menu.

Also -- is this a ULN-2 2d Expanded or is it a legacy box. If it is a legacy box, your best bet may be to go back to an earlier version of MIO Console.

Best regards,

B.J. Buchalter
Metric Halo

If you continue to have problems, please post the text of the crash log and also whether your box is a legacy or 2d Expanded.

Wich is why I started this thread :p

bj wrote on Sat, 15 February 2014 16:48The crash looks like to has to do with console sync, but it is not 100% clear because I can't see the entire thing.

Try rebooting your box with the downarrow button on the front panel held down and see of that works. If it does, use the erase-bootstates command from the utilities menu.

Nothing happens when I am holding the downarrow button.

bj wrote on Sat, 15 February 2014 16:48Also -- is this a ULN-2 2d Expanded or is it a legacy box. If it is a legacy box, your best bet may be to go back to an earlier version of MIO Console.

It is a Legacy Box. What earlier version do you mean and where can I get it? Will that work with OS X 10.9?

[View Forum Message](#) <> [Reply to Message](#)

I just downloaded Mio 5.5 and it works.
Thats great because I can start recording now. But is there anything I can do now to use the 5.6 Version in future?

Subject: Re: MIO Console 5 quit unexpectedly

[View Forum Message](#) <> [Reply to Message](#)

Is your box a legacy box, or do you have the 2d Card.

If it is a legacy box, the quickest way to move forward is to get a 2d Card upgrade.

We deprecated legacy support a couple of years ago -- and while the consoles have continued to support legacy boxes, they simply do not get the same level of testing that Expanded boxes get. It appears that this crash is something that is intermittent with legacy boxes, and we have not tracked it down yet.

If your box is an expanded box, work with support to help us determine what is going on.

Best regards,

B.J. Buchalter

Ah -- sorry, I just saw that you answered the question about your box type earlier in the thread.

[View Forum Message](#) <> [Reply to Message](#)

I've had a 2882 sitting in a box for several years, and I finally got a Mac new enough to run it. I first got it years ago for use by a consultant, then my son used it.

Today I downloaded MIO Console 5.6.06.218 and it comes up without the 2882 connected. As soon as plug in the firewire cable, I get the DoArchiveObject(MIOPlugInNode) SIGSEGV just like the post above from last Feb.

Forum search says this is the only thread discussing this crash, and I don't see a resolution.

[View Forum Message](#) <> [Reply to Message](#)

There is an answer in the thread above. If your box is a legacy box (which I suspect that it is), use MIO Console 5.5:

http://metric-halo.com/MIO/MIOConsole_v.5.5.208.zip

You can (and should) use the Firmware and Driver from the latest 5.6.06.218 download.

If you want to use the most recent version of MIO Console, you should consider getting a 2d Card upgrade for the unit.

If this is a 2d Expanded box, please open a ticket with support, and we'll determine what is going on.

Ah, thanks! I was going to ask if an older version of MIO Console would work on newer MacOS ... I'm running 10.9.5 on my "new" mid-2010 MacBook Pro.

[View Forum Message](#) <> [Reply to Message](#)

It will work, but Mac OS may say that the Console was created by an unidentified developer.

Apple made a change to the signing process for 10.9.5, and obviously, apps that were built long ago don't meet the new signing requirements.

You can work around that by <control>-clicking MIO Console and selecting "Open" from the popup menu. You will get a dialog saying that the app is from an unidentified developer - and asking if you want to launch it anyway. Choose to launch it. After that the Finder won't ask about that copy of MIO Console again -- so you only have to do the <control> click the first time you run it.

[View Forum Message](#) <> [Reply to Message](#)

I trashed the latest MIO Console and downloaded 5.5.208 above (before I saw the "use latest fw").

I was able to run MIO Console, connect to the 2882, and see levels on channel 1 with a mic connected.

I then ran 2882 firmware upgrade with FW file in download for legacy boxes vers 2.2.08.

In preferences checked "enable legacy support" then relaunched MIO Console to take effect.

Prior to FW upgrade and legacy support selection got a spinning beach ball of death on record panel

when enabling channel 1 and hitting record (was getting levels from mic in).

Repeating after FW upgrade and legacy support, got this crash instead:

Subject: Re: MIO Console 5 quit unexpectedly

Posted by [Mike_Feldman](#) on Thu, 27 Nov 2014 09:12:28 GMT

[View Forum Message](#) <> [Reply to Message](#)

The immediately above crash was because drivers weren't installed properly.

The legacy 2882 is working properly, or at least for the bottom portion of the learning curve.

[View Forum Message](#) <> [Reply to Message](#)

hey there,

my ULN2 (legacy)

i downloaded and installed the older mio 5 as the latest version i had didn't work as proper as on my mac mini 2011 - which i sold now.

i'm using my new macbookPro (end 2014)

first i couldn't listen to any! sound with out having the computer crashed.

the mio makes the computer breakdown when i try to click on the "recorder" or "+DSP" window. and it crashed with every sound like "email sent" "empty trashcan" etc...

after a while of several breakdowns, i managed to have logic running

yesterday it didn't crash every 2 minutes anymore but when i shut down logic it broke down again. i couldn't even save my song. i first had to disconnect (thunderbolt-FW800-FW400cable) the whole thing to make logic start again without uln2.

i lost all my latest worksteps.

i decided to buy 2nd card already but till i have it i would like to listen to my itunes or work without having the computer crashed all the time..

thank you very much for your support.

cheers
neil

[View Forum Message](#) <> [Reply to Message](#)

You need to download the most recent version of the MIO Software and install the driver that is included in that package. The newest driver is required for compatibility with Yosemite. You should continue to use the older version of MIO Console with the your legacy box.

+1

In case it's useful for anyone else, my legacy ULN-2 (s/n #109) is working with a MacBook Pro (Retina, 13-inch, Mid 2014) running OS X 10.10.3 .

I'm using:

- MIO Console 5.5 (from MIOConsole_v.5.5.208.zip)
 - Driver: 5.4d232 [1088] (from the most recent version of the MIO software)
 - Firmware 2.2.08
-

[View Forum Message](#) <> [Reply to Message](#)

I've had exactly the same problem as the OP with my legacy ULN-2, but finally stabilised around the helpful suggestion of 'mojen' above:

- MIO Console 5.5 (from MIOConsole_v.5.5.208.zip)
- Driver: 5.4d232 [1088] (from the most recent version of the MIO software)
- Firmware 2.2.08

However, the Record Panel isn't working. Clicking on it gives me the spinning beachball of death and I have to Force Quit console.

Any clues?

Cheers,

James

Please open a support ticket so we can work through this with you.

When you get the spinning beach ball, open the "Activity Monitor" and sample MIO Console from activity monitor; send us the text of the sample report with your ticket and we'll figure out what is going on...

Vous devriez prendre le temps de basculer la connexion vers Adsl2+ et voir s'il y a encore des désynchronisations dans ce mode.
