I got an ULN-8 and a Tube-Tech LCA2B (stereo compressor), which I'd like to use as a stereo bus compressor.

Tube-Tech LCA2B backside: performanceaudio.com/images/products/312/1500/32206_r.jpg

Almost all of my preamps INs/XLR are being used by mics.

What is the most economical routing, where I don't "lose" much IOs of my ULN-8 ?

I'd like to listen to my LCA2B on a bus, while recording.

Can I take advantage of the scenario described at 03:02 youtube.com/watch?v=UHjtXEp82fA ?

Is there some convertor/adaptor/device which allows connection a device like LCA2B to AES INs of my ULN-8?
