Hello happy MH owners,

I am using an ULN-8 with Ableton Live and a mono instrument is plugged into the ULN-8. I would like to route it to Ableton in mono and get it back in stereo. Currently, this is achieved within MIO Console Mixer with 2 strips : the first one is mono, gets the signal from the ULN-8, and sends it to Ableton through FW; the second one is stereo and gets the stereo signal from Ableton with the I/O Insert. I am looking for a way to achieve the same thing with one single strip. Would you know whether this is possible ?

Thanks for your help,

Best regards,

Matt
