I really do hope that JB will read this because it seems to be that the ULN-8 is sending some data which will turn the Genelec Monitors into MONO Mode

I am using the Genelec 8260 connected with a professional SPDIF (75Ohm) to AES/ EBU (110 Ohm) cable between a Blue Ray Player and the 8260.

When I switch off the 8260 then and plug in a Metric Halo uln-8 with a Vovox AES / EBU cable ) the Monitors will turn automatically into a "MONO" mode. This MONO- mode stays persistent until I reset the monitors with a GLM2 DSP Preset .

I already sent out a note to Genelec but if someone here in the forum might have an idea about the cause of this problem I would be interested to hear about

thank you

ok, please ignore my post. Genelec just told me its a known bug in their Monitors ;-( well this is what I call A BUG , a 7000 euro pair of studio monitors are switching themselves into MONO mode when changing the AES source
