Hello,

I am the proud new owner of a ULN-8, so forgive me if the answer is blatantly obvious.

I'm trying to connect my ULN-8 to a Korg ms20 by way of a midi to cv converter which is a Kenton pro mkII.

The way I had it connected to my old set up was midi out from the sound card into midi in on the Kenton with patch cables connecting the Kenton to the ms20 passing the midi info using cv, and audio out of the ms20 back into an input on the sound card. So this is also the way I tried to connect to the ULN8, however it does not work. The issue is that the ULN 8 does not show up in the mac OS X audio midi setup window like my old sound card ?

Can anyone explain where I am going wrong ?

Or alternatively how I can set it up so that the Kenton is receiving midi information from the ULN8 ?

I am using an iMac with OS X 10.8.5 and logic as my DAW

Please help !
