Hello

we want to record 16 preamped ULN channels with ULN8 and mixing down to 8 digital AES/ EBU . In parallel we want to track the same 8 channel downmix through a Studer 961 (stereo bus goes into Tape Machine) . So I would call this a parallel recording session with both supported, pure digital path, pure analog path.

Does anybody know how to do the correct MIO setup and how to daisy chain the 2 ULN units for this matter ?

thanks a lot!
