We would like record and monitor 32 channel in such way that mixers of LIO8 AND the ULN8 (MIO) I can see as on mixer at the same time.

Using this configuration I want to send signal to the same outputs from the two devices. I need 8-10 stereo outputs, 2x8 inputs would be analogue ones, with 2x8 ebu external D/A converter. What is the steps of the correct setup of that mode of work of this configuration (if the is any)?

Thank You
