Hello,

not sure if i'm going wrong somewhere, but using a 2882 legacy as my A/D converter and want to use another 8 channels via ADAT (focusrite Saffire).

The signal seems to be showing up in my console (although channel 1 adat seems to meter in multiple channels on the console)

anyway, When i comes to getting the adat channels to show up in Protools, nothing.

it's giving me the Analogue channels no problem, but i don't know how to get the adat channels up in the I/O set up.

not sure if the issue is with protools or with the console.....

help?
