As title says, no meters in channels strip, limiter etc. in Mio Console.

How do I fix that?

Kind regards, Mattias

Probably it would be best to open a support ticket

<https://mhsecure.com/support>

Please provide more detailed information.

Does the box show up in MIO Console at all?

Are there any meters in MIO Console at all?

Do the controls in MIO Console affect the configuration of the box?

How many busses do you have in the mixer?

The box shows up in mio console.

Yes meters work and...

... controls affect the configuration of the box.

Ten busses.

If i close the mixer setup and open one of the templates the meters inside plugins start to work again.

Note that to get metering on a strip, it must be routed to a bus. Also note that there are only metering slots for up to 8 buses. It sounds like you have run out of metering slots on the DSP.

To elaborate on what Jon said, there are a limited number of metering slots available; the buses consume quite a few slots (56 -- 48 for input and 8 for output), so once you go above 8 busses you use up all the slots, and any further meters are inactive.

The question is -- do you really need 10 busses; often we find that people are using busses when they are not required; if you can drop back to 8 or fewer busses, you won't lose the meters...
