Subject: Help MIO console will not force quit. Never seen this behavior.

Tried to open V-Control Pro 1 while Eucon was running. Now MIO console is completely locked up. Meters flashing, message says one box is in factory default state. Mac won't let me choose which state to boot from. Tried trashing MIO Console, re-installing and it's still locked up.

I've evidently been booted off the email list yet again and there's no one at MH.

How do I trash all preferences for this?

Anyone?

The preferences for MIO Console are in

<home-folder>/Library/Preferences/MIOConsole Preferences

You can trash that entire folder.

It sounds like you have a midi loop on the path you set up for the midi controller...
