The steps I'm taking are

1. Configure the console as desired.
2. Go to Utilities menu and select "save snapshot #"
3. Select Presets on the lio 8 hardware, encoders with saved snapshots light up
4. I press the encoders but the presets do not load up, or loads up elements from the snapshot randomly.

Would love some help with this.

I'm pretty sure when you save a snapshot it's meant to save every level of parameter. Recalling just isn't working.
