
Subject: System Audio playing on DAW 3?

Sometimes if I choose the MIO in the system audio settings, the audio from safari then sometimes gets routed to DAW 3/4. I thought it was because I also choose the 2882 as a output in the music player VOX, but even if I close VOX and switch back and forth between integrated Audio and 2882 in the audio settings of macOS, audio still gets routed to DAW 3/4.

I've also checked the audio midi settings and even there system audio is set the channels DAW 1 and 2.

Another Problem I have is that sometimes Firewire 1 vanishes in the MIO Console and then I get strange Stereo Pairing Options like FW 18/ Analog 1 as an Output Option.
