I recently installed 3d card in LIO-8. I have a 2006 late macbook (osx 10.7.5). I can't hear any playback from itunes, youtube, etc. I can hear analog inputs if I route them directly to an output, but can't hear them through the main bus. The main bus doesn't show any levels at all. What am I doing wrong?

Try adding an input strip from the Mixer menu with an input "#1 LIO-8 : Host 1/2". Then assign it to the "MAIN" bus. I'm still figuring it out my self... In my case, I can't delete the "SOLO" strip!

You may need to update to 10.8.5 (10.7 may be too old). How do you have the box connected (USB or MHLINK)?

You cannot delete the Solo bus strip; it is managed by the console and is used for PFL/AFL. We will add support to allow you to hide it in the future.
