Hi there good folks.

I am having big trouble with my trusty 2882 (no 2d). Since today it's no more recognized by my Mac Pro 3.1 from 2008.  
It all started this morning: Launched Logic Pro 10.3.3 and opened up a project. Sound was totally distorted with Logic giving me Samplerate errors.  
I restarted Logic and suddenly the 2882 wasn't recognized anymore.

I then reinstalled the driver (5.4d217) and reinstalled the Firmware (2\_2\_08). Didn't work.  
The panel of the interface gives me the following information:

Sample Rate: 96 (even though I only work with 44,1)  
Clock: Internal  
Status: Power, Firewire and Locked are green

Inside the Mio Console (5.5.01.208) it says:

Firmware: Offline

Any help us highly appreciated.  
Cheers for now,  
putte
