Hi there,

Any routing wizards out there? :p

I have been mixing mainly in Logic and have been able to successfully switch between my mix and a reference track in iTunes or Spotify (comes through via inputs 1/2) by sending the master bus in Logic to output 17/18, and adding that as a monitor source in Monitor Control (ULN2 2D).

Now... I have started sending all my tracks into the 18 inputs of Mio Mixer, to take advantage of Character settings and basically, I think it sounds and feels better to mix here. Since I have all my inputs/outputs occupied, how do I set it up in Monitor Control so I can switch between my main bus in MIO and a reference track on iTunes?

I have come a long way in terms of routing through MIO console, but this one has had me scratching my beard for over a week.

Thanks in advance.
