Does anybody have a good workflow for using the record panel as a backup recorder?
I thought of routing Timecode from ProTools to the record panel and whenever PT is running Record Panel would record. Unfortunately I can only feed LTC, which is a bit of a pain. Using a MTC to LTC converter is an option but I don't have one...
Is there any trick how to feed MTC to the Record Panel?

Is there any other way to control the record panel (apple script ? MMC?)

thanks

I don't think there is anything you'll be able to do without feeding LTC right now.

But you should file a feature request using the Help > New Feature Request... in MIOConsole3d. Please be as detailed as possible about what you would like to see; we'll see if we can get it integrated.

Also, you could maybe use the level-based trigger. Not 100% sure, but maybe using a recording click or something...

Thanks bj,
I will write a feature request.
