do I have to do anything to get midi working ? nothing shows up in my audio / midi support, on both machines I have

thanks, Nicholas

You have to connect with USB (the MIDI ports are not exported over MHLINK yet). With pb7 you can connect with USB and MHLINK simultaneously, and use MHLINK for audio and control while using USB for MIDI.

got it.. thank you very much, Nicholas

will we have midi over ethernet for the final release ?

New MH user here! On this same subject...

Plugging in the USB cable, I can see my MH LIO-8 as a selectable MIDI device, but I am not getting any MIDI input on it. Any suggestions?

And, how do you configure the system to use USB for MIDI but still use Ethernet for audio?

I have come to believe that it was a fundamental misunderstanding on my part. I was trying to use the MH LIO-8 MIDI input to receive performance data from a keyboard, when I think that is not the kind of MIDI data it was intended to receive. I subsequently plugged up a separate USB MIDI interface and moved along. Never tried again.

I use the midi interface for keyboards controllers whatever all the time it works perfect via usb

Maybe that was my issue then; I have the LIO-8 connected to my computer over Ethernet, not USB.

But I'm now using a Motu 8-in/8-out MIDI interface, which, for MIDI, is beyond what the LIO-8 would do anyway, even if I got it working for MIDI. So no big deal on my end. Glad it's working for you!

This is expected to work for generic MIDI I/O if the box is connected to the computer via USB.

If the problem is specifically for the built in MIDI port on the ULN-8, one possibility is that the

connection between the main board and MIDI connector board may have become unseated or partially unseated. So that is worth checking.

It is sounding like it's supposed to work if the MH unit is connected to your computer via USB; is it supposed to work if connected over Ethernet?

Yeah, so that was probably my issue. Again, for me personally, no big deal at this point. I'm happy with my separate MIDI interface, and happy with the LIO-8 over Ethernet. But glad that the puzzle is solved!
