Hi guys, I've had a LIO 8 for around 8 years and had an issue where if I use the DI and then unplug the instrument from the DI a little while later white noise will pop up on the channel. It's random but it happens fairly regularly and it's fairly loud at least 12db

I've just recently bought a brand new ULN8 3D and the same thing has happened! Whats the deal?

Does anyone else have this problem? Is there a fix?

I have not experienced this with my ULN-8.

I have only had the unit since January but have used the DI several times for instrument DI.

You should open a support ticket so we can understand the nature of the problem:
