Subject: Sending an Aux to an Aux?

Hi - apologies in advance if this query is a case of missing the obvious...

I have MIOConsole3D set up such that I send to the headphones via an Aux with a direct insert to feed headphone outputs on that Aux. But I also want to be able to send the Haloverb I have set up on a different Aux to the headphone Aux... I'm sure I'm missing something, but it doesn't seem possible to send one Aux to another Aux?

Any advice appreciated!

Tim

You need to add a new input strip, set the Reverb Aux bus to be the source on that input strip, and then send that strip to your headphone aux. You should use the reverb 100% wet for this configuration.

Of course! That makes a lot of sense.

Much appreciated BJ

One more related question - is there a reason that Aux strips don't/can't have direct out slots? Of course it's fine to use an I/O insert plugin to achieve the same end, but just wondering if this is a possibility.
