Hello,

I would like to use MIO Strip and Halo vErb on tracks in logic... What I'm trying to do is just "insert" them onto my logic track/channel with the I/O plugin and take the output in the IO lugin to DAW 3/4... I have setup MIO console channel to receive on DAW 3/4 and it is routed to the Main out. this seems right to me but no signal comes into the MIO channel strip??? when I bypass the IO plugin then i have output again, but when it is on, nothing. no signal in MIO mixer or logic.

AM i doing something wrong?

I swear this was working fine a few weeks back but maybe not, or mayb I am just missing something now?

Please help, I prefer not want to clutter my mixer with more Output channels, I prefer doing an "in the box mix" to logic stereo out bus

thanks

alex sunny
