Hello, All. I'm having no luck getting any audio to show up in any of the analysis instruments within Foo complete.

I've watched video tutorials and referenced the online manual, but no success.

I have Foo version 4.2.3. MHLINK w one LIO-8, two ULN-8s, and one 2882DSP. Beta 3d/pb9

I use Logic on OS 10.14.6. How do I get audio into Foo ? Thanks !

Sorry; missed this post. Hopefully you have sorted this out by now, but in the interests of anyone coming across this:

Mac OS Audio Security FAQ

Explains what setting you need to fix in macOS to allow 'Foo to get audio input.
