Hello,

Has anyone had issues with simply running OS audio through 3d? I was playing iTunes and suddenly the audio stopped and now I can't get audio to pass on the host channel. Logic will playback fine but not the OS. I've tried rebooting the unit, unplugging it, rebooting my iMac and even unplugging the iMac with no luck.

Any ideas?!?

Is it possible that it is only not playing for mono files?

I don't think so since i can't playback iTunes stereo files.

No meters in MIOConsole on the host channel? Or just no output from the box?

MHLink or USB?

The meters were playing with audio then both stopped suddenly. now during playback there's no meters or audio.

over MH link

But it works from Logic?

I'm not sure of the mechanism that can explain that...
